

Bao Thanh Quach

Software Developer | Inventory & ERP-Style Business Applications

Stanton, CA | (626) 316-3009 | baothanhquach1661@gmail.com | baothanhquach.dev | github.com/baothanhquach1661

Professional Profile

Developer with two years of professional web development and hands-on experience running e-commerce operations. Builds inventory and ERP-style business applications covering multi-location stock, warehouse transfers, audit trails, and product data quality, using C#/.NET, SQL, and automated CI/CD to Azure. Brings day-to-day knowledge of Shopify catalogs, SKU mapping, fulfillment, and inventory reporting from working on the operations side.

Technical Skills

- **Languages:** C#, PHP, Python, SQL, JavaScript, HTML/CSS
- **Frameworks and testing:** ASP.NET Core MVC, Entity Framework Core, ASP.NET Core Identity, xUnit
- **Databases:** SQL Server, PostgreSQL, SQLite
- **Cloud and DevOps:** Microsoft Azure, Git, GitHub Actions, Docker, Cloudflare
- **Business systems:** Shopify, inventory control, SKU mapping, sales and inventory reporting

Projects

NailToolInventory | Multi-Location Inventory Management github.com/baothanhquach1661/NailToolInventory

- Built a role-based inventory application in C#, ASP.NET Core MVC, and EF Core with per-location on-hand, reserved, and available quantities, receipts, issues, count adjustments, and reorder levels.
- Designed warehouse transfers as a state workflow (Draft, In Transit, Completed, Cancelled) and an immutable audit trail recording user, timestamp, and before/after quantities; each stock change and its history entry commit in one database transaction.
- Deployed to Azure (Windows Server VM, IIS, Azure SQL) through GitHub Actions with secretless OIDC authentication, health checks, and automatic rollback; 10 xUnit tests run on every pull request.
- Diagnosed a failed first production deployment (HTTP 500) through Windows Event Viewer, traced it to an Azure SQL cold-start timeout, and fixed it with a targeted retry policy.
- Piloted at a nail supply store, giving staff one traceable view of stock across locations.

CatLens | Shopify Catalog Data Review Tool github.com/baothanhquach1661/catlens

- Built an ASP.NET Core MVC application with PostgreSQL that imports Shopify inventory exports and flags missing SKUs, duplicate SKUs, and quantities above a configurable threshold, with CSV reports for review.
- Validates each file in full and replaces the stored snapshot inside one transaction, so a failed import never leaves partial data; read-only by design, with no access to the live store.

Relevant Experience

ATN Nail Supply | Website and E-commerce Operations Manager | Garden Grove, CA Jan 2026 – Aug 2026

- Maintained inventory data, SKU mappings, and the Shopify catalog, and coordinated online order fulfillment.
- Prepared monthly sales and inventory reports and audited recurring application costs.
- Resolved website, checkout, application, and account-access issues with staff and vendors.

Wing Hop Fung | Website Specialist | Monterey Park, CA Oct 2021 – Dec 2022

- Worked with teams on inventory and fulfillment accuracy, and maintained Shopify product data, order records, and promotions.
- Monitored online performance with analytics dashboards and provided multilingual customer support.

CNV Company | Web Developer | Ho Chi Minh City Jun 2017 – May 2019

- Built websites and data-tracking features for service businesses, maintained them, and trained clients to use them.

Additional Experience

Amazon Flex | Delivery Driver | California Jan 2023 – Present

- Complete last-mile delivery routes independently, the final step of the order-fulfillment chain.

Education and Languages

- **Cypress College** | Associate in Science, Computer Science | 2023
- **Languages:** Vietnamese, English, Mandarin, Cantonese
